

EXTERNAL OHS ACTIVITIES

It is important to EVRAZ to promote and improve our HSE management system through the active involvement of contractors and participation in external associations and conferences.

Contractor engagement

The Group continues to integrate our contractors into the EVRAZ HSE management system. These efforts include increasing contractor's accountability for HSE performance. Work with contractors is regulated by the Standard on HSE Contractor Management and consists of a four-stage procedure.

In addition to these four procedures, contractors take part in practical EVRAZ training sessions. Contractors cannot be exposed to hazardous work until their practical skills and knowledge have been assessed. Contractors are obliged by the Russian legislation to complete OHS trainings. EVRAZ checks learning protocols of all contractors before they start work. EVRAZ ZSMK also conducts trainings among contractors

STANDARD ON HSE CONTRACTOR MANAGEMENT

STEP 1

Health and safety qualification for contractors

STEP 2

Analysis of contractor compliance with health and safety requirements

STEP 3

Signing contract with contractor, including contractor's safety responsibilities

Evaluation of how well contractor has met health and safety responsibilities

using specialised simulators and tests. Training methods are based on identified risks, task-specific safe work practices, and established safety and health regulations.

GOALS FOR 2019 AND MIDTERM PERIOD

Lockout – tagout – tryout system

EVRAZ implements a lockout-tagout (LOTO) system, which is used to protect personnel against the unauthorised activation of equipment during repair works. The LOTO initiative is scheduled to be completed by 2020. In 2019 it is planned to integrate the LOTO system into 10 facilities in the Siberia region of Steel segment and at 12 – in the Urals region of Steel segment, which would result in a 70% level of integration.

Employee engagement

As a part of EVRAZ culture of safety programme, leadership sessions for managers have been developed, with a view to boosting managers' engagement in developing the health and safety management system and to building their commitment. For the next period we plan to work on integrating operational level employees into health and safety management systems. In previous years EVRAZ actions focused on developing and improving training sessions for employees; in 2019, the focus will be on moving from a safety culture of adhering to rules to a safety culture of personal commitment among not only managers but also operational level employees.

Occupational health services

In 2018, we developed a programme that aims to improve health services for managers. This programme will be performed in 2019 and it includes regular medical check-ups, regular medical supervision, monitoring of following medical prescriptions and developing culture of healthy lifestyle. EVRAZ ZSMK is planned to be the first company to improve health services for managers in 2019.
